Are you a parent of a child between 8 and 12 years old?

Researchers at Case Western Reserve University need your help! We are currently conducting a research study on fatigue and childhood brain injury and need children who have and have not experienced a brain injury.

| After talking with a researcher and giving your consent, you and your child will both complete three online surveys. The first survey will take about 30 minutes to complete and the second and third surveys will take less than 5 minutes to complete. You’ll be asked questions about your child and your child will be asked questions about themselves. After completing the surveys, your child will be entered to win 1 of 10 $5 Amazon gift cards. | For all children:  
- 8-12 years old  
- Proficient English speaker  
- Attending school  
- Can follow 2-3 step directions and participate for 30 minutes with breaks |
| **If you live in or near Cleveland,** you and your child will be asked to come to campus for an eye tracking study after you complete the online surveys. Your child will look at different pictures while a computer captures what he/she looks at and how much effort it takes for him/her to complete the tasks. Eye tracking is not invasive and is known to be safe. It’s like watching TV or playing video games! After completing the eye tracking tasks, your child will receive a **$10 Amazon gift card.** | For children who have not experienced a brain injury:  
- No history of cognitive, emotional, or learning disability or special education services |
| For children who have experienced a brain injury:  
- At least 6 months of age at injury  
- Injury occurred at least 6 months ago  
- No medical history of abuse or abusive head trauma |

To participate and/or to learn more about the study, please contact Jessica Salley Riccardi at jxs1654@case.edu, or Dr. Anastasia Dimitropoulos at anastasia.dimitropoulos@case.edu or (216)368-3471.

This study has been approved by the Case Western Reserve University’s Social and Behavioral Science Institutional Review Board: Study #20191478. The title for this IRB Study is “Eye Tracking in Children with Brain Injury: A Pilot Study on Attention, Organization, & Cognitive Fatigue.”
