THE ROYAL OBSERVATORY,
GREENWICH.

Dear Prof. Dayton Miller,

We have made certain that we have no records here about the determination of the velocity of sound by Halley & Flamsteed. The paper by Derham (36 pages) given in full in the Transactions of the Royal Society says that the time was $13\frac{1}{2}$ ~~seconds~~ in coming from Shooter's Hill to the Observatory.

I am writing to the

Royal Society to find
out if they know anything
more, and will let you
know the result.

My wife and I are
very grateful for the
photos taken at the
Harvard Observatory Garden
party. They are very
interesting souvenirs of
a most pleasant visit.

Yours very sincerely
J.W. Dyson
