

#22

This letter is in response to one sent two days earlier by Miller to Michelson, requesting that he use his analyzer to study curves made with the phonodeik. We have Miller's carbon copy of this two-page letter.

Letterhead Ryerson Physical Laboratory The University of Chicago

Febr. 15 1911

My dear Professor Miller:

The curves and the lantern slides were duly received in good order – and are certainly beautiful.

I regret to say the analyzer is at present out of order and I have no one I should care to trust to do the work required to make any thing like an accurate determination of the curves.

I think in any case your results are far more accurate than any my machine can furnish.

With kind regards
Sincerely Yours
A. A. Michelson
