*Letter from G. Coradi of Zurich to Miller (three pages)*

Zurich, the 30<sup>th</sup> of Novbr 1916.

To  
Mr. Dayton C. Miller, Cleveland

Dear Sir,

I have the pleasure to acknowledge receipt of your honored dated the 23 Oct. and of all printed matter mentioned in your letter.

I am indeed very touched and encouraged to hear that the Analyzer I supplied you gave practically full satisfaction and that you have been pleased with the execution and fine adjustment of the apparatus. It is for myself very important to hear that with an extended use like that which you make with the Analyzer the adjustment has proved to be very durable and I am very interested to state the practical value of this fact.

I shall study your printed matter and the really very interesting book which I am very pleased to have, and for which, I beg to agree my Thanks.

After studies made I can write you whether I shall be disposed to make and sale the apparatus you suggest me to make. I am however always interested to new ideas which represent besides the only pure scientific value practical and commercial ones.

I very gratefully accept the permission of making use of your idea of the remodeled details at the analyzer.

It is really regrettable that this Analyzer of which you are proofing the high value in extent practical application is still nearly unknown. I am therefore greatly please with your pamphlet books and photos and shall take the liberty to mention these when occasion occurs.

The totality of work and idea of your researches is admirable and of most interesting results and I am very grateful to you as to one of the few of the possessors of a Henrici-Analyzer which have been kind enough to give me an idea of the work done with the apparatus.

If this would have been more regularly the case, I would probably have had more practical success with the Analyzer when I would have been able to bring the different kinds of application to that general knowledge by means of notes in my catalogue and description.

Thanking you repeatedly for the interest and confiance for the construction of the apparatus suggested to complete the Henrico-Analyzer you show me. I have the pleasure of sending you my latest catalogue.

I am  
    dear Sir  
with the expression of my gratitude  
    Yours very truly

G. Coradi
