Speaker Series

Trust Issues

Chris Haufe

Elizabeth M. and William C. Treuhaft Professor of the Humanities
Department of Philosophy, Case Western Reserve University

In this talk, I canvas a range of problems — “trust issues” — which are either insensitive to or actually *exacerbated* by the reliability of scientific knowledge. Each of these issues emerges out of a conflict between basic features of the scientific process, on the one hand, and basic features of the nature of trust. The overarching theme of my talk is that there are lots of reasons to not trust science that are consistent with the idea that scientific knowledge is reliable.

Friday, January 20

4:00 p.m.

Seminar Room 280F
